### **FT72C TuffGuard Competition Backboard Padding - Product Specification**

1. **PADDING CONSTRUCTION** - Padding shall be molded to meet or exceed all standards set forth by the NFHS, and FIBA. Padding shall be cellular construction with a skin of average minimum thickness of .125 inches. The padding system shall be capable of mounting to all brands and styles of backboards by means of eight bolts (provided). A steel track molded into the padding shall provide rigidity strength to the mounting system. The two "L" shaped padding segments shall be joined in the center by a line-up stub. The corners of the padding shall be molded square for maximum safety and shall not require gluing or forming for attachment. All hardware shall be zinc-plated. Padding system shall be available in a variety of colors. Colors shall be continuous throughout the thickness of the padding, not only the skin. Padding shall include a 10-Year Limited Warranty. Approximate shipping weight 15# each.
